PROFESSIONAL SUMMARY

Backend Engineer with nearly 3 years of experience designing and building production-grade backend systems using Python, FastAPI, PostgreSQL, and Redis. Experienced in developing scalable REST APIs, asynchronous workflows with AWS SQS, secure integrations with AWS S3 and Stripe, and performance optimization through caching and database optimization. Passionate about building maintainable, cloud-ready applications using Docker, CI/CD, and modern backend architecture principles.

TECHNICAL SKILLS

Languages: Python, SQL, PHP

Backend: FastAPI, SQLAlchemy, SQLModel, Pydantic V2, Slim (PHP), REST APIs

Databases: PostgreSQL, MySQL, Stored Procedures, Query Optimization, Indexing

Caching: Redis (Cache-Aside Pattern, Key Design, TTL Strategies)

Cloud & AWS: EC2, IAM, S3, SQS

DevOps: Docker, Docker Compose, GitHub Actions, Traefik, Linux, Git

Testing: Pytest (Unit Testing, Integration Testing, Mocking)

Security: JWT Authentication, RBAC, Stripe Webhooks, SMTP

Observability: Structlog, Structured JSON Logging

Architecture: CQRS, Asynchronous Processing, Event-Driven Architecture

PROFESSIONAL EXPERIENCE

Backend Developer – KloudWorx Technologies Pvt Ltd

April 2023 – January 2026

- Engineered scalable backend services for enterprise HRTech, digital onboarding, e-signature, and government platforms using FastAPI and Slim (PHP).
- Owned the design and development of 100+ RESTful APIs, collaborating closely with frontend teams and database engineers.
- Designed asynchronous document processing workflows using AWS SQS, enabling event-driven PDF generation after multi-party digital signature completion.
- Built secure file management workflows using Amazon S3 with pre-signed URLs for controlled document upload and download.
- Optimized MySQL stored procedures, indexing strategies, and query execution plans to improve database performance under production workloads.
- Improved API response times by 25–30% through Redis cache-aside implementation, efficient cache-key design, and TTL optimization.
- Implemented JWT authentication and Role-Based Access Control (RBAC), securing internal and customer-facing APIs.
- Integrated Stripe payment workflows with secure webhook verification and reliable event processing.
- Introduced structured JSON logging using Structlog, improving production observability and debugging efficiency.
- Developed automated unit and integration test suites using Pytest with extensive mocking.
- Developed a production-ready FastAPI backend starter adopted internally across multiple projects, standardizing project structure and backend development practices.
- Built reusable modules for authentication, Redis caching, AWS S3, SMTP, SQLAlchemy session management, Structlog-based logging, centralized exception handling, and Pytest-based testing, significantly reducing setup time for new services.

KEY PROJECTS

DOit – Workflow Management Platform

Live Demo

- Designed and developed a production-ready task and workspace management platform using FastAPI, PostgreSQL, Redis, and React.
- Implemented JWT-based authentication and Role-Based Access Control (RBAC) supporting secure multi-workspace authorization.
- Designed modular backend architecture with reusable service layers and efficient SQLAlchemy query patterns.
- Improved API performance using Redis cache-aside strategy with optimized cache keys and TTL-based invalidation.
- Containerized the complete application using Docker Compose with Traefik as a centralized reverse proxy providing HTTPS routing.

- Automated application deployment using GitHub Actions and VPS-based Docker deployments.

Technologies: FastAPI, PostgreSQL, Redis, SQLAlchemy, React, Docker Compose, Traefik, GitHub Actions, JWT, RBAC

EDUCATION

Full Stack Development Certification – NxtWave	2022 – 2023
M.Sc. Chemistry – Adikavi Nannaya University	2017 – 2019
